

Tempest NG900 Antenna Orientation

The purpose of this bulletin is to update the recommended Tempest® NG900 antenna orientation.

CoachComm® is constantly evaluating the deployment and performance of our products in order to offer you the best game day experience. This bulletin provides new best-practice recommendations for using your Tempest NG900 system. If you have any questions after reviewing this document, please contact Customer Support at 1.800.749.2761.

Antenna Orientation Recommendations

For an improved signal and game day performance, we have determined that a small adjustment to the antenna orientation of the Tempest NG900 transceivers (on the mast) will provide a better overall experience with the Tempest NG900 system.

The current instruction is to angle the antenna at 45 degrees and to orient its tip toward the 50-yard line; however, we are now recommending an angle of 90 degrees with the same orientation toward the 50-yard line. The diagram below references this latest recommendation.
