

How To Install RT Cover

To install the Radio Transceiver (RT) cover and protect your RT from water ingress, follow the steps outlined below. If you have any questions or trouble performing this procedure, call CoachComm's Customer Support at 1.800.749.2761.

Installation Steps:

1. Disconnect cables and remove the RT from the mast bracket and/or tripod mount.
2. Take note of where your RT's whip antenna and connector cap are currently installed (antenna should be in the port labeled "R").
3. Remove the whip antenna and connector cap. Set them aside.
4. Install the cover onto the RT by sliding it over the device from top to bottom. Make sure that the cover's logo is facing forward and that the ports on the bottom of the RT are accessible.
5. Install the two provided rubber gaskets onto the RT's two antenna connectors; then, reinstall the antenna and connector cap in their original locations.
6. Remount the RT in its original location on the mast bracket and/or tripod mount, and reconnect its cables.

Note: CoachComm recommends to remove the RT cover from the RT and allow it to dry completely after a game where the RT cover gets wet.
